California's Global Warming Solutions Act, AB 32, will reduce California's greenhouse gas emissions to 1990 levels by the year 2020. How might this legislation impact California's economy and workers? How might certain industries, like transportation, construction, energy and manufacturing, be impacted? And what can be done to ensure that this legislation creates high-quality jobs in California rather than sending jobs to states with less stringent environmental regulations? Come learn how you can have a positive effect on the implementation of AB 32.
